

Recycling Guide

Lamp model: Houyi

Our Dear Customers

B.E.N. Corporation takes sustainability very seriously, we take oath to design through a circular economy, where nothing is wasted and everything is recycled and reused. For these reasons we are working hard to ensure that the lamps' life cycle ends with the start of a new chapter for its components and materials. If you are a customer that is subscribed to our rent plan or our insurance plan, you know to bring the lamp to your closest B.E.N. manufacturer after the rental/insurance period ends.

If you are a customer that is not subscribed to either of our plans and If some/all parts of the lamp cannot be repaired/reused as spare parts, please send them to their correspondent recycling center. Here is a guide to each material and its handling agency:

Wood: Go to a local household waste recycling centers or wood recycling facility where they shred the wood. The outcome shredded wood can be used by paper facilities, wood pellets and other products

PLA: Hand it over to a recycling plant to extrude it into new filament after grinding it up

Electronics and Cords: Regional recycling place where they break them apart into different components and then each component is handled differently to be recycled appropriately. A metal recycling facility or any Best buy would also accept them and recycle them

Aluminum: Hand it over to a metal recycling facility where it will be remelted and used in other products

Cardboard: Place your cardboard in the recycling bin aimed for cardboard, make sure it is dry and clean. If your cardboard container is large, make sure to flatten or/and cut it in half, that way you make more space for other recycled cardboard. If you don't have a recycling bin nearby, go to a nearby local cardboard recycling center
